The clinical approaches to the chronic degenerative diseases that drain our resources, and compromise our well-being, have become almost exclusively symptom-focused. The common wisdom is that they are idiopathic with final outcomes to be managed rather than prevented or cured. That they are potentially reversible rarely enters into any discussion between doctor and patient. A Homeostatic approach to Cure and Prevention for Researchers and Clinicians Working in Toxicology, Immunology, Neurology, and Internal Medicine Reversibility of Chronic Degenerative Disease and Hypersensitivity, a four-part encyclopedia, offers a much different perspective on chronic degenerative disease, one that disputes the idiopathic label attached to most, as well as the usual fatalistic prognosis. The first volume, Regulating Mechanisms of Chemical Sensitivity, demonstrates that one aspect common to chronic diseases is the disruption of systemic and cellular homeostasis. Environmental pollutants play a large role, along with the contributions of genetic and life style factors, in disrupting the self-regulating mechanisms built into our normally adaptive cells. As dyshomeostasis develops in the nervous system, causes should be found and removed before the metabolic-induced tissue changes take place and...
