The coal measures of Missouri occupy the northwestern half of the State and underlie approximately 23,000 square miles, of which 14,000 are considered to be probably productive territory. The beds belong to the Pennsylvania series of the Carboniferous and, as in Iowa, include two well-marked divisions, a lower and an upper. The lower or productive portion occupies a belt along the eastern edge of the field, and mining is confined entirely to this area. The formation consists largely of shalus and...
