Literally, the word bronzing means a brown color being derived from the Italian word bronzino, which signifies burnt brown ; the term now, however, is taken as meaning the coloring of metals, wood, leather, etc., with a bronzing powder, no matter what the color of that powder may be. Bronze powders are usually dusted on a surface that has been coated with some suitable agglutinant to cause the powder to adhere, in some cases a bronze paint is used, while, in the case of leather articles, a liquid or bronzing fluid is employed. Such a fluid is one of the easiest methods of bronzing because the fluid is similar to a quick-drying varnish, that, when dry, exhibits a bronzed effect, which is generally due to the presence of a superabundance of an aniline dye. Success in the art of bronzing greatly depends on circumstances, such as the temperature of the alloy (metallic bronzing powder) or...
