

## Search for Dark Matter with the CDMS Experiment

By Joseph Manungu Kiveni

SPS Nov 2014, 2014. Taschenbuch. Book Condition: Neu. 220x150x29 mm. Neuware - The subject of cosmology has proven, during the last few decades, to be a precision observational science mostly due to the Incredible number of experiments performed to better understand the composition of the universe. The large amount of data collected strongly indicates that the bulk of the universe s matter is in the form of nonbaryonic matter that does not interact electromagnetically. Combined evidence from the dynamics of galaxies and galaxy clusters confirm that most of the mass in the universe is not composed of any known form of matter. Measurements of the cosmic microwave background, big bang nucleo-synthesis and many other experiments indicate that 80% of the matter in the universe is dark, non-relativistic and cold. The dark matter resides in the halos surrounding galaxies, galaxy clusters and other large-scale structures. Weakly Interacting Massive Particles (WIMPs) are well-motivated class of dark matter candidates that arise naturally in super-symmetric extensions to the Standard Model of particles physics, and can be produced as non-relativistic thermal relics in the early universe with about the right density to account for the missing mass, the dark matter. 484 pp. Englisch.

### Reviews

*These kinds of pdf is the best publication readily available. This is for anyone who statte there had not been a well worth reading through. You wont truly feel monotony at at any moment of your own time (that's what catalogs are for relating to if you ask me).*

-- **Neil Halvorson**

*A brand new eBook with an all new point of view. I could possibly comprehended every little thing using this written e publication. Your life span is going to be change once you comprehensive looking at this publication.*
