To the difference between values for  $c = 0.2$  and  $c = 0.3$ , add again  $2sd c$ , and the resulting sum added to volume for  $c = 0.3$  gives the volume for  $c = 0.4$ , and so on. To do this conveniently prepare three columns as shown: Assume, for example, values as in the heading to the form for table just given, viz:  $w = 20$  s 1. Then for  $c = 0.1$ ,  $Q = wc^2$  7. 444 for  $c = 0.2$ ,  $Q = 14.963$  First difference, 7. 519 The second difference is  $P = 2s d c = .074074$   $Z = 7$  New first difference 7. 593 It was unnecessary to compute for  $c = 0.2$ , as the value of  $dQ$  might have been added at once to 7. 444 to get the first difference, 7. 519. R8. A clear geometric conception of these quantities may be obtained from Fig. 22, from which it is evident that for Tables for the prismoidal formula, while very simple in manner of construction, must cover a large amount of space if the amount of numerical computation incident to their use is to be reduced to a minimum, and it is thought that the diagram...
