Brand New Book ***** Print on Demand *****.From the INTRODUCTION. 1. The branch of phonetic science known as Intonation, i. e. the variations in the pitch of the speaking voice, has not hitherto met with adequate treatment in books on pronunciation owing to the want of a satisfactory method of indicating these variations. Intonation, when marked at all, has generally been indicated by signs such as r, , , v, etc. placed at the beginnings and ends of words or sentences. Such marks may give a rough idea of the kind of intonation required, as for instance that the pitch is to rise or fall, but they fail to show with any sort of accuracy the precise points of the sentences at which the changes of pitch begin and end, and they do not profess to indicate the absolute pitch, or the subtle variations of pitch which are perpetually occurring in speech. 2. Accurate records of intonation have, it is true, been produced by means of tracings of voice vibrations, obtained by the use of a kymograph or otherwise. The vibrations may...
